**Subject:** More on the HIs of 1 and 3 question, and the Dimock data set

I just met with Den and Kathy. They want us to meet with the OSCs (Fetzer, Ann) about the Dimock data on Monday to discuss this further. I told them Bob is out. Dawn, are you in? I am at HHS in the morning but available in the afternoon; Karl I am thinking you are available most of the day? That should be our message at 1:30 pm today with Shawn, that we are evaluating the data together for any short term implications.

Jack, on the link you sent if you go to the FAQs page from that you can see the schematic that refers to removal actions at 10-4 and/or HI >3, but as Dawn pointed out this morning there is history in the old Roy F Weston "blue book" for removal action levels of using an HI of 1 for direct exposures like drinking water as support for a removal and there doesn't seem to be an easy answer here.
